Create Test Pass Report

XCLE Log:

Contact Support

The XCLE Query Form is a lightweight html and .js front end running on python/flask as the backend. The models are loaded into the backend so that the features entered in the form can be immediately analyzed (**Generate Report**) and sent to the Test Pass Generator (**Create Test Pass Report**).

Here is an explanation of how each part of the form should be used:

**Release Type:** Choose Base or Update, according to the current submission.

**Publisher Selection:** These publishers are the current publishers incorporated in the model based on their relevance to prediction. If not in the list, please choose the first option: **'Not Listed'**.

**Pass Number:** This is the pass number for the current submission. Pass number is equivalent to the number of times this release has entered cert, including this one.

**XCID:** Please enter the XCID with dashes. Please pay special attention to typing in the DMID (first) part and the date (second) part correctly. Date entry should be in format YYMMDD. This entry is parsed and used by the Test Pass Generator. If the XCID is not available, there must at least be a dummy entry with the date in the correct format.

**Multiplayer Game:** Check this box for any type of multiplayer functionality in the submission.

**Blockbuster Game:** Check this box for blockbuster submissions.

**Independent Game:** Check this box for Independent submissions.

**Append Form Data:** This button allows generating multiple predictions in one report. Order of operations is as follows – Enter submission features, click Append Form Data, (repeat steps 1 & 2 for all submissions), Generate Report, Create Test Pass Report. Clicking Reset UI Data will erase all appended submissions.

**Generate Report:** After all field are filled out, click this button to generate predictions. A report will be generated to send to the Test Pass Generator. This report will be overwritten every time this button is clicked.

**Reset UI Data:** Clears the current entered data and resets to default entries. This includes all appended data.

**View Instructions:** View / download this documentation.

**Create Test Pass Report:** Takes the generated report and sends to the Test Pass Generator. The final report should be available in excel format at the address <\\\\CTCERTXCLEDEV\\TestPlanGeneratorExcel> labeled with the XCID. This report should be generated within 5 minutes. If it takes any longer than this, please email me: [v-micpal@microsoft.com](mailto:v-micpal@microsoft.com).

**Contact Support:** Please report any bugs or problems with submitting an XCLE Query.
